# THE ELECTRIC CURRENT

## SIMPLIFYING DISTRIBUTION AUTOMATION IN SUBSTATIONS AND POLE-TOPS

When the cable doesn't fit, and you need a solution... **FAST**

# GO TO THE GREAVES ADAPTER ZONE!

## PT-FX Shoo-Pin™ Compression Adapters

- All-copper compression adapters
- Allows reliable termination of highly stranded flexible copper cable into mechanical lugs
- Used in locomotive, mining, marine, and machinery applications
- Fits into mechanical set-screw type connectors in panels, transformers and machinery
- Features revolutionary Shoo-in™ barrel-opening design for easy cable insertion
- Fabricated of wrought copper with pin of Class B copper conductor
- Insulating covers are provided

For Copper  
Cable Only

## PT-R ReduceЯ™ Cable Reducing Adapters

- All-copper compression adapters
- Use where cable is oversized to reduce voltage drop on long runs
- Use fit existing C/B, transformer, or other gear lugs
- For Class B 'building wire' cable stranding only
- Fits into mechanical set-screw type connectors in panels, transformers and machinery
- Fabricated of wrought copper barrel with pin of Class B copper conductor
- Insulating covers provided

For Copper  
Cable Only

9" Standard with  
Brush Steel Ring Insert

# ModPLUS

*A revolutionary, contemporary flush mount, that is raising the ring in lighting.*

7" Standard White

Ultra thin white flush mount available in round or square standard 7", 9", 12" and 16" designs.

Multiple versions including motion sensor and emergency battery back-up options.

### Magnetized Magic!

The magnetized surface allows alternative Chrome or Brushed Steel trim rings to quickly snap in place.

7" Chrome Ring Insert

760-2880 lumens thru integrated LED module meeting JA8-2016/Title 24 requirements.

Color temperature of 3000k/90 CRI, dimmable and ETL listed.

Emergency Battery Back-up

Motion Sensor

First there was 4 square...  
and now the **REVOLUTIONARY 5 Square® Box!!**

You've struggled with 4 Square boxes for years - you know how small, cramped and time consuming they are. Finally, there is a solution that allows you the space you have always needed.

The **5 Square®** Boxes (5" x 5" x 2-7/8") provide up to 88 in<sup>3</sup> of interior volume which more than doubles that of most existing boxes on the market.

Create a robust and unrivaled infrastructure for the life of your facility with the **5 Square®** Products!

**Fire Signal**

- TWICE THE VOLUME AS MOST BOXES
- SAVE LABOR...INCREASE PROFITS
- ELIMINATES TROUBLESHOOTING TIME AND COST
- FULLY UPGRADEABLE SYSTEM
- SPECIFIED BY ENGINEERING FIRMS, HOSPITALS, UNIVERSITIES & GOVERNMENT AGENCIES
- AVAILABLE IN ZINC OR RED

**Telecommunications**

- INTEGRAL CABLE MANAGEMENT
- SAVE LABOR...INCREASE PROFITS
- FACILITATES MIN. BEND RADIUS REQUIREMENTS
- SUPPORTS CURRENT AND EVOLVING SYSTEMS
- SUPPORTS PoE PLUS
- SPECIFIED BY ENGINEERING FIRMS, HOSPITALS, UNIVERSITIES & GOVERNMENT AGENCIES

# SIMPLIFYING DISTRIBUTION AUTOMATION IN SUBSTATIONS AND POLE-TOPS

---

Technological advances in “all-in-one” communication and automation processors allow distribution of information in many protocols while performing sophisticated logic functions and alarm annunciation

Utility substation automation schemes are typically complex, involving a variety of intelligent electronic devices (IEDs), microprocessor-based relays, meters and monitoring devices. The information collected is then sent to communication processors or RTUs, before being passed on to proprietary HMI interfaces, SCADA Master Stations, Energy Management Systems (EMS) and/or enterprise networks.

Within this scheme, the component parts are often cobbled together by utility automation groups from a multitude of competitor options with varying protocols (some proprietary), configuration options, wireless transmission bands and interconnections.

Given that utilities may have hundreds of substations and even more pole-tops to monitor and control remotely, the complexity of distribution automation has traditionally been staggering. Fortunately,

over the past two decades, substation automation has evolved and changed.

“In the past, the design of the substation was a patchwork of many different devices,” says Russ Fanning, a P.E. with over a decade experience in the automation group of a large Wisconsin utility. “Once you finally got the patchwork figured out, you could replicate that pattern but when you went to the next substation and you wanted to bring in something new, you were starting from scratch again and trying to patch that new piece in.”

Today, Fanning says the focus is on stripping out as much of the complexity associated with substation automation as possible.

Technological advances over the past several years have reduced the need for the same amount of hardware in favor of “all-in-one” communication and automation processor units that can interpret and distribute information in many protocols while performing sophisticated logic functions and alarm annunciation without the need for PLCs and racks of RTUs. These all-in-one devices even eliminate the need for security-risk PCs and proprietary HMI interfaces.

The communication and automation processor

can connect to nearly any substation device in its native protocol, perform advanced math and logic, and securely present the source or calculated data to any number of clients in their preferred protocol.

For utilities installing equipment in new greenfield substations, upgrading aging legacy technology, or concerned over support, this is a welcome development.

#### *Interpreting Communications and Protocols*

Fanning, who was previously employed at a Wisconsin-based utility for 38 years, started his career as protection technician. After getting his engineering degree in 1990, he worked in substation engineering as a protection engineer, then R&D engineer and in 2007 became a principal engineer in the substation automation group.

“In my last 5-6 years at the utility, I was responsible for distribution automation and substation integration, using the Orion Substation Automation Platform to interface with all the IEDs that were inside the substation and at the pole-tops. I integrated pole-top device IEDs into the distribution automation systems when they were enabled with communication capabilities,” says Fanning.

Fanning was first introduced to NovaTech – the

# WE HAVE THE ROPE TO GET THE JOB DONE.

company he now works for – in 2002. NovaTech has more than 30 years as a supplier of automation and engineering solutions for electric utilities and process manufacturing industries. The company's flagship product is the Orion Substation Automation Platform, which performs an expanding array of automation and security applications in electric utility substations with minimal setup and maintenance. Over the years the utility has installed more than 500 Orion units to improve the operations of both old and new substations to date.

According to Fanning, the distribution automation system he installed at the time specifically involved 30 Orion units using NovaTech's unique Distribution Automation algorithm designed to automate the switching of substation breakers and pole-top devices to restore power and/or to avoid power outages and equipment damage.

The challenge at the time was having to work around ways to retrieve the data from the IEDs and other devices, says Fanning. Multiple protocols are often used for distribution automation, including proprietary protocols with custom communication links.

"In a typical substation set-up at the time, there was often different software in each device and I would have to manipulate the data just to be able to share it," says Fanning. "For one system I worked on, I needed a proprietary protocol and software just to communicate to the device."

In most modern substations, microprocessor-based relays involve a proprietary protocol, so the communications processors must be able to retrieve real-time fault event data and records by speaking to the relays in their native protocol.

Another standard protocol is DNP (Distributed Network Protocol), which is often used by SCADA

# NEW

# Sceptalight™ LED

Introducing the NEW Sceptalight™ LED light fixture and adapter kit. Sceptalight LEDs offer significant energy savings and can last beyond 50,000 hours without a single need for maintenance. Certified and tested for use in indoor, outdoor, wet locations, wash down and corrosive environments, Sceptalight LEDs are certified to the latest LED light fixture standards and NEMA 4X approved.

## STANDARDS

LIGHT FIXTURE (LVPF/LVPE-LED)	CSA C22.2 250.0	UL 1598
LIGHT ENGINE (LLED-15)	CSA T.I.L. B-79A	UL 1598C

### RETROFIT OPTION

Sceptalight LEDs can easily retrofit onto existing installations for increased energy savings.

### CORROSION RESISTANT

Heat sink is coated with a durable e-coat layer that prevents corrosion.

### NEMA 4X AND IP66 RATED

Approved for wet locations, wash down and corrosive environments.

### HEAT DISSIPATION

Specially designed heat sink ensures long life and optimum performance for over 50,000 hours.

### ENERGY EFFICIENT

1,000 lumens of light output is produced with only 15 Watts of electricity.

### DIMMABLE

Lights are dimmable down to 5% for maximum control of the lighting environment.

### POLYCARBONATE GLOBE

Impact and weather resistant for tough environments.

Master Stations, RTUs, IEDs and also for relays. To promote interoperation of IEDs from different vendors, the IEC 61850 is an international standard defining communication protocols for IEDs. Older IEDs may still use Modbus or other legacy protocols.

“The Orion product is an essential hub for all this data collection, both in collecting and, perhaps,

interpreting or actually taking action. The system could send that off to the control center to change setting, trip a breaker or switch a feeder,” says Fanning.

“There is a wealth of information that is being created inside newer IEDs, microprocessor-based relays and meters that, until recently, has been left behind because it was too challenging to collect and distribute it,” adds Fanning.

“Today you can drill down into those IEDs from a remote location using a secure connection.”

Reducing the driving time to remote sites was one of the biggest drivers in automating the substations, as well. The utility headquarters, and his home, were a 2 to 3-hour drive to some substations.

“With the Orion, I could access the IEDs in the substation and get a clear picture of what was happening,” says Fanning. “Knowing what the situation was, I could drive there knowing what I had to do or I could delegate that work to someone in the area – depending on what it was.”

Today, open-source web-based SCADA and HMI solutions eliminate the need for a substation PC and its inherent software and cybersecurity concerns, at a fraction of the cost.

In this approach, engineers can build interactive screens accessible from standard web browsers. For example, a browser can be

# We've Got You Covered

**SAVE Time & Money with Kwikon ENT & Fittings compared to traditional EMT**  
Kwikon Electrical Nonmetallic Tubing (ENT), fittings, slab boxes and accessories are designed to work together and provide the most robust concrete-tight ENT system on the market.

## KWIKON ENT

- Color-coded stripes for easy cable identification
- Available in coils, 10' sticks, and reels
- Lightweight and flexible for easy install that reduces labor by up to 50%

## KWIKON FITTINGS

- Six locking tabs for unbreakable connections
- Concrete-tight, requiring no solvent welding or tape
- Fire, pull and impact resistant

## KWIKON SLAB BOXES

- Boxes are installation ready and concrete-tight
- Approved for support of ceiling fans up to 35 lbs and luminaries up to 50 lbs
- Clear Vue removable cover for marking visibility and prevents slurry or stucco from entering the box

## KWIKON FORM STUBBIES

- Eliminate the need to drill to the deck
- Available in the original stubby design, the angled version and the Multi-Link
- Protects the ENT from potential damage during the removal of wood forms

used to view data from connected IEDs and RTUs. The software comes with pre-configured pages for data archiving, sequence of events recording, alarm annunciation, alarms, trending and communications diagnostics. Customized screens could easily be built for one-line diagrams, IED faceplates, and control screens.

As for HMIs, web-based systems provide a direct-to-touchscreen connection out of the box without a PC as an intermediary. Information can also be accessed by Smartphone, which will bring up a substation and graphically show the faceplate of each device with push buttons as if the technicians was physically there.

"The HMI is served up through webpages that are easily constructed with graphic software. It's all integrated in one package, so building an HMI is so much simpler than it used to be," says Fanning.

If there is a physical manifestation of the reduction in complexity, Fanning points to the substation. In many substations he worked in there would be racks or cabinets of devices with hundreds of wires and blinking lights.

"Today, substation layout is much cleaner. You can probably eliminate entire writing racks and cabinets – or at least make it much smaller – depending on how you are handling your I/Os to the IEDs," says Fanning.

# ENGINEERED, TESTED & CERTIFIED

A Tethered Tool System for Applications Involving Work at Height

## LEAVE IT TO THE EXPERTS

Snap-on provides a drop prevention system like no other.

We'll work with you to determine your drop prevention needs... including the tools, attachment points, lanyards, pouches, and holsters, that combine to create a turnkey solution that enables your workers to do just that...WORK.

## SAVE TIME AND MONEY

Engineered attachment points don't interfere with the functionality of the tools, and are more durable than simple "add-ons" that require frequent maintenance or replacement.

## BEAT THE STATISTICS

About 70% of drops happen during the exchange of the lanyard from one tool to another. The Snap-on Tools@Height system features independent tethering, which means each tool is attached to its own lanyard. Minimizing exchanges reduces the likelihood of drops and increases safety.

## MINIMIZE RISK

Independent tethering also allows the tool to be removed from and returned to its holster or pouch using just one hand. Safety is improved by allowing the user to maintain the critical "three points of contact" when working at height.

## RETAIN CONTROL

Our modular approach means you can configure the tools/holsters based on a user's personal preference, while providing a system that meets your safety standards.

See what the most comprehensive tool drop prevention solution in the industry can do for your team's safety and productivity by contacting:
